

# Exemplar Grade 7 Mathematics Test Questions

[discoveractaspire.org](https://discoveractaspire.org)

# Introduction

This booklet explains ACT Aspire® Grade 7 Mathematics test questions by presenting, with their answer keys, sample questions aligned to each reporting category on the test. A key includes the question's depth-of-knowledge (DOK) level,<sup>1</sup> an explanation of the task posed by each question, a thorough explanation of correct responses, ideas for improvement, and more. The exemplar test questions included here are representative of the range of content and types of questions found on the ACT Aspire Grade 7 Mathematics test. Educators can use this resource in several ways:

- Become familiar with ACT Aspire question types.
- See what typical questions in each ACT Aspire reporting category look like.
- Help reinforce or adjust teaching and learning objectives.
- Learn how ACT Aspire improvement idea statements can help students identify key skills they have not yet mastered.

ACT Aspire Mathematics tests provide a picture of the whole of a student's mathematical development, including a look at the concepts and skills new to the grade level as well as whether the student has continued to strengthen, integrate, and apply mathematics from earlier grades. These components are important in judging how a student is progressing and what next steps are appropriate.

## Reporting Categories

The following ACT Aspire reporting categories help to provide this picture.

### Grade Level Progress

The Grade Level Progress reporting category represents a student's achievement related to the mathematical topics new to the grade. To allow for an analysis of student strengths, the category also includes a reporting category for each of the grade-level domains that constitute Grade Level Progress for that grade.

---

<sup>1</sup> Norman L. Webb, "Depth-of-Knowledge Levels for Four Content Areas," last modified March 28, 2002, <http://facstaff.wcer.wisc.edu/normw/All%20content%20areas%20%20DOK%20levels%2032802.doc>.

## Foundation

The Foundation reporting category looks at the mathematical growth of the student with topics learned in previous grades. This mathematics should not be static, but should be strengthened as the student progresses through the grades. Students should integrate and become more fluent in these topics, using them flexibly as needed to solve problems, give explanations, and accomplish tasks of greater complexity that reflect grade-level expectations for mathematical practice.

Together, the Grade Level Progress and Foundation categories make up the entirety of the ACT Aspire Mathematics test. Two other reporting categories, Modeling and Justification and Explanation, pull out information that crosses the other reporting categories.

## Modeling

The Modeling reporting category highlights questions that assess understanding of mathematical models and their creation, interpretation, evaluation, and improvement. Modeling is closely tied to problem solving, and because models are frequently used to teach mathematics—especially in the early grades—modeling is also closely tied to learning mathematics. Modeling expectations increase from one grade to the next. To ensure that the Modeling reporting category provides a better indication of being on track, some modeling skills are a part of the reporting category in lower grades but not in upper grades.

## Justification and Explanation

The Justification and Explanation (JE) category focuses on giving reasons for why things work as they do, where students create a mathematical argument to justify. The evidence is collected through constructed-response tasks designed around a progression of justification skills connecting grades 3 and up.

## Structure of the Mathematics Test

The structure of the ACT Aspire Mathematics test is the same from grade 3 through early high school (grades 9 and 10), assessing new topics for the grade and whether students continue to strengthen their mathematical core. (For the Early High School test, grade 8 topics are included in the Grade Level Progress component to keep together formal algebra, functions, and geometry topics. This makes Grade Level Progress and its subcategories more coherent.) Within this structure of content comes a level of rigor represented in part by a distribution of depth of knowledge through Webb's level 3. The Foundation component includes only DOK level 2 and level 3 because that component is about assessing how well students have continued to strengthen their mathematical core. Across all parts of the test, students can apply Mathematical Practices to help them demonstrate their mathematical achievement.

Mathematical justification is a way of knowing. In theory, students will be able to learn new mathematics more reliably if they have a strong framework to build upon. Mathematical justification is glue for that framework. The Common Core State Standards for Mathematics (CCSSM) recognizes this in its Mathematical Practice 3 (MP3): "Create viable arguments and critique the reasoning of others." The ACT Aspire Mathematics test focuses attention on student justification.

Students respond to JE tasks with a grade-level-appropriate mathematical argument. These tasks utilize a constructed-response format, allowing students flexibility in the way they shape their arguments. Each response is evaluated on the basis of demonstrated evidence of particular skills associated with mathematical justification. These JE skills include stating relevant properties and definitions that support the justification, constructing an argument that includes reasons for claims, and demonstrating indirect proof or command of counterexample.

The JE skills identified in table 1 are arranged in a progression from grade 3 through EHS. At each grade, the JE skills are divided into three levels. Trained scorers weigh evidence and then make an overall determination about the evidence for or against each skill level. Demonstrating JE skills at one level is evidence of having learned the skills in previous levels. In addition to looking at the JE skills, each response is rated according to how successful the student was in completing the task assigned; this is the Progress rating. A full-credit response shows evidence of the required level of JE skills needed to solve the problem and applies these skills to complete the task.

For each of the JE tasks, evidence for and against each of the JE levels is combined with the Progress rating and mapped to a 0–4 scale. These task scores contribute to the JE reporting category and to the total Mathematics score. Some of the tasks contribute to the Grade Level Progress reporting category, and the others contribute to the Foundation reporting category.

Level 2 JE skills are those most closely aligned with grade-level focus. Level 3 JE skills are more advanced, and level 1 JE skills are those where students should have a fluent command. As the research base increases for this progression, the list will grow and become more refined. Note that there are two JE statements for evidence of misconceptions. These are marked with asterisks in table 1.

As students progress from grade to grade, expectations increase according to which JE skill belongs to which level. Some level 3 JE skills will become level 2, and some level 2 will become level 1.

**Table 1. Justification and Explanation Skills Progression**

Justification statement	JE level at grade:				
	3–4	5	6–7	8	EHS
Provide an example.	1	1	1	1	1
State a definition, theorem, formula, or axiom.	1	1	1	1	1
State a property or classification of an object.	1	1	1	1	1
State a relationship between two or more objects.	1	1	1	1	1
State one or more steps in a procedure.	1	1	1	1	1
Provide a visual representation.	1	1	1	1	1
Provide a computation.	1	1	1	1	1
Use a Specific Statement to draw a Conclusion or Provide Specific Support for a Statement.	1	1	1	1	1
Explain a pattern using words, algebraic expressions, or numeric operations – OR – generate a sequence from a rule.	2	1	1	1	1
Use two or more Specific Statements to draw a Conclusion.	2	1	1	1	1
Indicate an error occurred.	2	1	1	1	1
Explain why a step in a procedure is necessary.	2	2	2	1	1
Make a conditional statement (e.g., If-Then, When-Then).	2	2	2	1	1
Draw and label a visual representation that illustrates a mathematical concept, property, or relationship.	2	2	2	1	1
Use a pattern or sequence to support a Statement or Conclusion.	2	2	2	1	1
Provide a counterexample of a conditional statement.	2	2	2	2	2
Use a General Statement to draw a Conclusion or Provide General Support for a Statement.	2	2	2	2	2
Use a Claim to draw a Conclusion and provide Specific Support for the Claim.	2	2	2	2	2
Use a Claim to draw a Conclusion and provide General Support for the Claim.	3	3	2	2	2
Use a Specific Statement and a General Statement to draw a Conclusion.	3	3	2	2	2
Draw and label a visual representation that illustrates a mathematical concept, property, or relationship, and use the labeling in one's prose to clarify an argument.	3	3	3	2	2
Provide a computation and reference the computation in one's prose to clarify an argument.	3	3	3	2	2
Use proof by example.*	3	3	3	2	2
Conclude from a conditional statement.	3	3	3	2	2
Indicate an error and use a mathematical concept (definition, theorem, or axiom) to explain why an error occurred.	3	3	3	3	2
Provide a counterexample and verify that the conditional conclusion does not hold for the example.	3	3	3	3	2

\* This statement represents evidence of misconceptions.

Table 1 (continued)

Justification statement	JE level at grade:				
	3–4	5	6–7	8	EHS
Understand that a statement can be true and its converse or inverse can be false.	3	3	3	3	2
State that the converse or inverse of a conditional statement is true because the original statement is true.*	3	3	3	3	2
State that an object belongs (or does not belong) to a class, state at least one of the common characteristics of the class, and state that the object has (or does not have) those characteristics.	3	3	3	3	2
Use two or more Specific Statements to draw a Conclusion and provide Specific Support for at least one of the Statements.	3	3	3	3	2
Use two General Statements to draw a Conclusion.	3	3	3	3	2
Introduce a pattern or sequence and use it to support a Statement or Conclusion.	3	3	3	3	3
Provide a counterexample and verify that the conditional hypotheses do hold for the example, while the conditional conclusion does not.	3	3	3	3	3
Conclude from a conditional statement and verify that the statement's hypotheses hold.	3	3	3	3	3
Use cases in a proof.	3	3	3	3	3
Use indirect proof (i.e., proof by contradiction).	3	3	3	3	3
Use two or more Claims to draw a Conclusion and provide Support for at least one Claim—at least one Claim or Support must be General.	3	3	3	3	3
State what is required to be a member of a class, verify that an object meets all of those requirements, and then state that the object belongs to that class.	3	3	3	3	3

\* This statement represents evidence of misconceptions.

## Improvement Ideas

ACT Aspire includes simple improvement ideas at the reporting category (skill) level on student and parent reports. These improvement ideas are provided for the lowest performing skill for each subject tested. The skills are always ordered from highest performing to lowest performing based on the percentage of points correct. If the percentages for two or more skills are tied, the skill with the lower number of total points is displayed first.

Keep in mind that the order of skills listed on reports may not always be exemplary of where to focus learning. For example, the skills in which a student performed within the ACT Readiness Range may not always be listed first, and the skills in which a student did not perform within the ACT Readiness Range may not always be listed last. Also, keep in mind the total number of points possible in each skill when interpreting the percentage correct.

There are two levels of improvement idea statements (low and high) for ACT Aspire summative reporting. Low statements are given on the report if the student's lowest skill score is below the ACT Readiness Range for that particular skill. High statements are given on the report if the student's lowest skill score is at or above the ACT Readiness Range for that particular skill.

# Answer Key

This section presents the grade, question type, DOK level, alignment to the ACT Aspire reporting categories, and correct response for each of several test questions. Each question is also accompanied by an explanation of the question and by the correct response as well as improvement idea statements for ACT Aspire Mathematics.

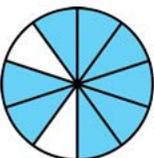

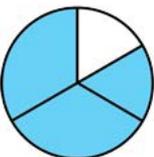

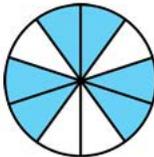

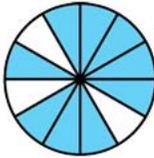

Some test questions are appropriate at several grades: as a part of Grade Level Progress when the topic is new to the grade and then in later grades as a part of Foundation (as long as the question is at least DOK level 2 for that grade).

## Question 1

Juliana divided the part of a number line from 0 to 1 into sections of equal length. She plotted point  $M$  on the number line, as shown below. One of the following circles is shaded to represent a fraction that is equivalent to the number represented by point  $M$ . Which one?

Options:

- A. 
- B. 
- C. 
- D. 
- E. 

Question type	CCSSM topic	Correct response
Selected Response	3.NFA, MP4, Recognize equivalent fractions and fractions in lowest terms (N 13–15)	E

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
3	Grade Level Progress > Number & Operations—Fractions	Yes	3
4–5	Foundation	Yes	3
6–EHS	Foundation	Yes	2

In this selected-response (multiple-choice) question, students must analyze the number line given and determine what fraction is being represented (CCSSM.3.NF.A.3). Because this question requires students to analyze the situation and connect different representations, it is a DOK level 3 question for the Grades 3, 4, and 5 tests. For all other ACT Aspire tests, it is a DOK level 2 question. Because students are interpreting models, this question is a part of the Modeling reporting category (MP4).

## Correct Response

After determining that the fraction at point  $M$  is  $\frac{3}{4}$ , students must then determine which of the circles provided has  $\frac{3}{4}$  of its area shaded. The circle in answer option E has 9 out of 12 equally sized sectors shaded, and  $\frac{9}{12}$  is equivalent to  $\frac{3}{4}$ .

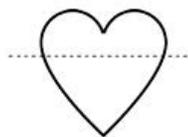

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 2

Explain what a line of symmetry is.

Explain why the dashed line drawn in the figure below is NOT a line of symmetry for the figure.

Question type	CCSSM topic	Correct response
Justification & Explanation (Constructed Response)	4.G.A, MP4	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	JE level	Modeling	DOK level
4	Grade Level Progress	3	Yes	3
5–7	Foundation	3	Yes	3
8, EHS	Foundation	2	Yes	3

This Justification and Explanation task elicits an explanation of why something is not true. The task is crafted carefully so that successful students must give a definition and tie it to their explanation—an important way of reasoning in mathematics and in many areas of life. The context here is symmetry, a topic from grade 4 (CCSSM.4.G.A.3, “Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry”). A response that successfully justifies the result will contain a general definition of a line of symmetry and show why that definition does not fit the specific situation shown by the drawing. This is JE level 3 reasoning for grade 4 students and would be a part of the Grade Level Progress reporting category. The task is also a part of the JE reporting category. This task would also be appropriate for the Grades 5, 6, 7, 8, and Early High School tests where it would be a part of the Foundation and the JE reporting categories. The reasoning skills assessed by this task are at JE level 3 for grades 4–7 and JE level 2 for grade 8 and EHS. At all grades, this is a task at DOK level 3.

The figure is a possible model for the definition of a line of symmetry, and the student must judge whether the model fits, so this question contributes to the Modeling reporting category (MP4).

### Correct Response

The reasoning in the following sample response is within reach of grade 4 students and would receive full credit.

A line of symmetry is a line that divides a figure into two equal parts where you can fold along the line and make the edges match up. Folding along the given line will not make the edges match up because it does not divide the picture into two equal parts, so the dashed line is not a line of symmetry.

The primary justification skills in this response are captured by the JE statements “State that an object belongs (or does not belong) to a class, state at least one of the common characteristics of the class, and state that the object has (or does not have) those characteristics” and “Use a Specific Statement and a General Statement to draw a Conclusion.” The response also demonstrates direct evidence of “State a property or classification of an object” and “State a definition, theorem, formula, or axiom.”

This response successfully completes the assigned task by stating the definition of a line of symmetry and using that definition to conclude that the line in question was not, in fact, a line of symmetry. In addition to successfully completing the task, the response also shows understanding of the given information and the required goal, and it expresses the argument in a clear and organized manner. Note that the definition provided in this response may not be adequate for higher grade levels.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Justification & Explanation	7	Work on identifying reasons for mathematical steps. Can you identify errors in someone's math homework?	Explain how to solve a problem on a calculator and why it makes sense to do all the steps.
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 3

Liam is making chocolate chip cookies. The recipe calls for 1 cup of sugar for every 3 cups of flour. Liam has only 2 cups of flour.

- How much sugar should Liam use?
- Explain why your answer is correct.

Question type	CCSSM topic	Correct response
Justification & Explanation (Constructed Response)	5.NF.B, MP3, MP4	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	JE level	Modeling	DOK level
5	Grade Level Progress	3	Yes	3
6–8	Foundation	3	No	3
EHS	Foundation	2	No	3

This questions prompts students to explain their reasoning and tie it to a real-world problem. Logical flow, number sense, and computation are key justification elements in this question. A successful student will make sense of the real-world problem involving fractions (CCSSM.5.NF.B) and provide appropriate justification and explanation (MP3).

For grade 5 students, this task would be a part of the Grade Level Progress reporting category. This task would also be appropriate for the Grades 6, 7, 8, and Early High School tests; it would be a part of the Foundation reporting category for those grades. The task is part of the JE reporting category. The reasoning required is at JE level 3 for grades 5–8. That same reasoning is JE level 2 for the Early High School test. It is a DOK level 3 task at all grade levels.

For grade 5, this task contributes to the Modeling reporting category. Students produce a numerical model and provide an interpretation. In higher grades this should be automatic, so this question does not contribute to the Modeling reporting category for the Grade 6 through Early High School tests.

## Correct Response

A student could receive full credit for the following sample response:

Liam has 2 cups of flour, which is  $\frac{2}{3}$  of the 3 cups of flour that the recipe talks about. So he should use  $\frac{2}{3}$  of the 1 cup of sugar that the recipe talks about.  $\frac{2}{3}$  of 1 cup is  $\frac{2}{3}$  cup. Liam should use  $\frac{2}{3}$  cup of sugar.

The JE statement “Use two or more Specific Statements to draw a Conclusion and provide Specific Support for at least one of those Statements” captures the complexity of the argument. This response also uses “State one or more steps in a procedure,” “Explain why a step in a procedure is necessary,” and “State a relationship between two or more objects.”

The response successfully completes the task assigned by giving the correct amount of sugar that Liam should use and thoroughly explaining why that amount is correct. The response demonstrates one successful pathway and presents a cohesive and well-organized argument.

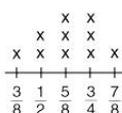

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Justification & Explanation	7	Work on identifying reasons for mathematical steps. Can you identify errors in someone's math homework?	Explain how to solve a problem on a calculator and why it makes sense to do all the steps.
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 4

Nigel's class placed 10 empty rain gauges on the playground Monday morning. The line plot below shows the number of inches of rainwater in each gauge after it rained Monday afternoon.

Number of Inches of Rainwater

What is the mean amount of rainwater per rain gauge, in inches, in the 10 rain gauges?

- A.  $\frac{25}{80}$
- B.  $\frac{5}{8}$
- C.  $\frac{51}{80}$
- D.  $\frac{37}{56}$
- E.  $\frac{51}{8}$

Question type	CCSSM topic	Correct response
Selected Response	6.SP.B, Extract relevant data from a basic table or chart and use the data in a computation (S 16–19)	C

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
6	Grade Level Progress > Statistics & Probability	No	3
7–EHS	Foundation	No	2

This question requires students to provide evidence that they can summarize and describe distributions (CCSSM.6.SP.B). This question is part of the Statistics and Probability reporting category within the Grade Level Progress component of the Grade 6 test as a DOK level 3 question. This question requires that students be able to interpret a line plot and use that information to summarize the data by calculating and differentiating quantitative measures of center. This question builds on previous skills regarding line plots and computation with fractions of unlike denominators (CCSSM.5.MD.B.2 and CCSSM.5.NF.A.1). This question could be part of the Foundation component for the Grades 7, 8, and Early High School tests as a DOK level 2 question.

### Correct Response

The key for this question is  $\frac{51}{80}$ , which is answer option C. The correct response demonstrates evidence that the student can identify equivalent fractions with like denominators, add those fractions, and find the mean by dividing the total by 10 (the number of rain gauges).

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

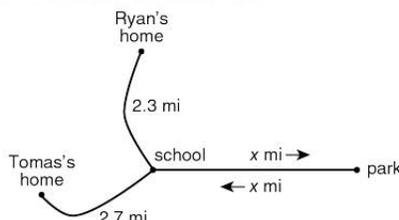

## Question 5

Ryan and Tomas walked to school and then to the park, as described below:

Ryan walked 2.3 miles from his home to meet Tomas at school.

Tomas walked 2.7 miles from his home to meet Ryan at school.

Once they were at school, the boys walked  $x$  miles to the park and then  $x$  miles back to the school.

The sum of the distance Ryan walked and the distance Tomas walked was at least 15 miles but not more than 21 miles. One of the following is the graph of the possible values of  $x$ . Which one?

- A. 0 2 4 6 8 10 12 14 16 18 20 22  $x$
- B. 0 2 4 6 8 10 12 14 16 18 20 22  $x$
- C. 0 2 4 6 8 10 12 14 16 18 20 22  $x$
- D. 0 2 4 6 8 10 12 14 16 18 20 22  $x$
- E. 0 2 4 6 8 10 12 14 16 18 20 22  $x$

Question type	CCSSM topic	Correct response
Selected Response	7.EE.B, MP4, Match compound inequalities with their graphs on the number line (e.g., $-10.5 < x < 20.3$ ) (A 24–27)	A

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > Expressions & Equations	Yes	3
8, EHS	Foundation	Yes	2

In this selected-response question, the student needs to find the total distance that Ryan and Tomas walked by setting up an inequality with the variable  $x$  and solving. The solution then needs to be matched to the correct number line representation (CCSSM.7.EE.B.4).

### Correct Response

The correct response is the graph of the solution to the inequality  $15 \leq (2.3 + 2x + 2.7 + 2x) \leq 21$ , which is answer option A. This question assesses DOK level 3 skills on the Grade 7 test and is part of the Expressions and Equations reporting category within the Grade Level Progress reporting category. On the Grade 8 or Early High School tests, the question would assess DOK level 2 skills as part of the Foundation reporting category. Students produce an inequality to model the situation, and this question is part of the Modeling reporting category.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
Expressions & Equations	7	Work on creating equivalent expressions using properties of operations. Create a list of what's the same and what's different when solving arithmetically versus solving algebraically.	Pick an expression from your math homework and create an expression that is equivalent. Describe to your teacher how you created the second expression.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 6

A store is having a sale on 3 different items. Each sign below shows the original price of an item and how to calculate the discount for that item. Click and drag the signs below to place them in order from least amount of **discount** to greatest amount of **discount**.

Question type	CCSSM topic	Correct response
Technology Enhanced	7.RP.A, MP4, Solve routine two-step or three-step arithmetic problems involving concepts such as rate and proportion, tax added, percentage off, and estimating by using a given average value in place of actual values (A 20–23)	

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > Ratios & Proportional Relationships	Yes	3
8, EHS	Foundation	No	2

This technology-enhanced problem provides evidence of the student’s ability to use proportional relationships to solve percent problems (CCSSM.7.RP.A.3), a skill that is frequently used in everyday encounters outside the classroom. When placed on the Grade 7 test, this question is part of the Ratios and Proportional Relationships reporting category within the Grade Level Progress reporting category. It is part of the Foundation reporting category on the Grade 8 and Early High School tests.

### Correct Response

The problem requires that students calculate multiple percentages and perform subtraction in the correct order according to the given information. They must pay careful attention to the fact that the question is asking for the order of the discount and not the final sale price. The correct answer puts the original prices in the order (from left to right) \$25.00, \$30.00, and \$24.00.

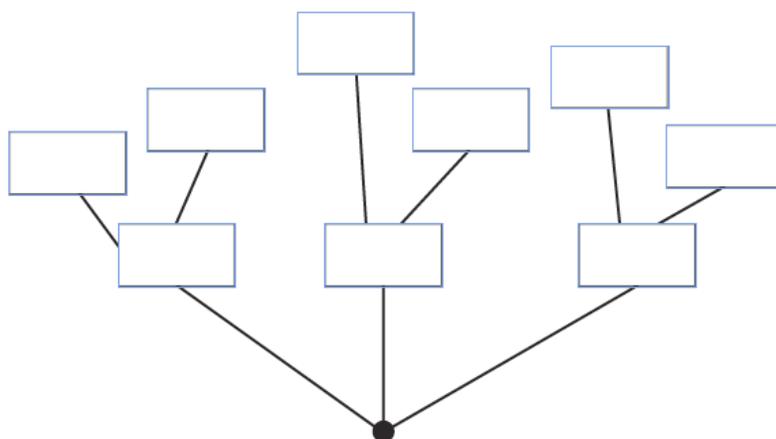

The process followed to solve this question requires some interpretation for students in grade 7 and is therefore a DOK level 3 skill on the Grade 7 test. The process becomes more routine in grade 8, so it would be a DOK level 2 problem on the Grade 8 and Early High School tests. The problem contributes to the Modeling reporting category at grade 7 because the student is modeling the descriptions on the signs with numerical calculations. For higher grades, this skill should be more automatic and drops off the list of what contributes to the Modeling reporting category.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
Ratios & Proportional Relationships	7	Work on representing and analyzing proportional relationships. Given a percent off in an advertisement, can you calculate the discount and the sale price?	Find three real-world situations that use percents. Draw a picture that represents each percent in the situation.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 7

Elaine's Grocery has a lunch counter where people can order 3 types of sandwiches: egg salad, chicken salad, or falafel. Sandwiches can be made with 2 types of bread: pita or baguette. Create a tree diagram by dragging and dropping the sandwich choices into the empty boxes to show all the possible combinations for a sandwich from this lunch counter.

pita	pita	pita
baguette	baguette	baguette
egg salad	egg salad	egg salad
chicken salad	chicken salad	chicken salad
falafel	falafel	falafel

Question type	CCSSM topic	Correct response
Technology Enhanced	7.SP.C, MP4, Apply counting techniques (S 28–32)	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > Statistics & Probability	Yes	2
8, EHS	Foundation	Yes	2

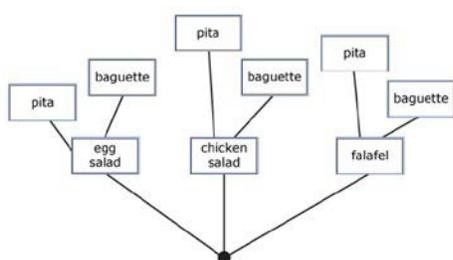

In this technology-enhanced problem, the student must demonstrate the ability to create a tree diagram to represent all the possible combinations of three sandwich types and two bread types (CCSSM.7.SP.C.8). Because the student is creating a mathematical model representing a real-world situation, this problem assesses a student's modeling skills (MP4). The student is given the framework of the model and must use the connections to the real-world situation to create a specific model for the situation. This problem is considered DOK level 2 and

contributes to the Statistics and Probability reporting category within the Grade Level Progress reporting category for the Grade 7 test. It is still DOK level 2 for the Grade 8 and Early High School tests, but on those tests the question would be part of the Foundation reporting category and the Modeling reporting category.

## Correct Response

To achieve a correct solution, “type of sandwich” boxes (i.e., falafel, egg salad, and chicken salad) should be moved to the three empty boxes closest to the point of origin of the tree diagram but can be placed in any order; then branching off the “type of sandwich” boxes would be the “type of bread” boxes (i.e., pita and baguette) in any order. There are 48 different correct response variations because the order within each type does not matter.

## Sample Correct Response

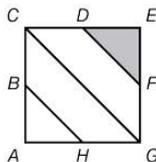

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
Statistics & Probability	7	Work on comparing populations based on random samples and finding probability using organized lists or drawings.	What kind of conclusions can you make when you choose a random set of people that you can't make when you choose your friends? Why is that?
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 8

In square  $ACEG$  shown below,  $B$ ,  $D$ ,  $F$ , and  $H$  are the midpoints of  $\overline{AC}$ ,  $\overline{CE}$ ,  $\overline{EG}$ , and  $\overline{AG}$ , respectively. A student thinks that the area of  $\triangle DEF$ , shown shaded, is  $\frac{1}{4}$  the area of square  $ACEG$ . Explain why the student is NOT correct.

Question type	CCSSM topic	Correct response
Justification & Explanation (Constructed Response)	6.G.A, MP3, Compute the area and perimeter of triangles and rectangles in simple problems (G 20–23)	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	JE level	Modeling	DOK level
6	Grade Level Progress	3	No	3
7–EHS	Foundation	3	No	3

This Justification and Explanation problem assesses students' ability to identify an error and use mathematical concepts to explain why it is an error. A successful student must give general mathematical truths (formulas and definitions) to support claims—an important way of justifying an argument in mathematics and everyday life. At an early age, many students incorrectly assume that if a region is divided into four parts and one part is shaded, then the area of the shaded part is one-fourth the area of the total region. In their responses, students will critique the reasoning of others (MP3).

This problem is a good example of a JE problem that could appear on any of the Grades 6, 7, 8, or Early High School tests. If appearing on the Grade 6 test, this task would be a part of the Grade Level Progress reporting category. If placed on the Grade 7, 8, or Early High School tests, it would be a part of the Foundation reporting category. Due to the justification and explanation required to answer this question, it would be classified as a DOK level 3 at all grade levels. At all grade levels, this task is part of the Justification and Explanation reporting category and requires JE level 3 reasoning.

## Correct Response

A student could receive full credit for the following sample response:

Let's say the length of a side of the square is  $x$ . Since a midpoint will divide a segment in half,  $DE = EF = \frac{1}{2}x$ . The formula for the area of a triangle is  $A = \frac{1}{2}bh$ , so the area of  $\triangle DEF = \left(\frac{1}{2}\right)\left(\frac{1}{2}x\right)\left(\frac{1}{2}x\right) = \frac{1}{8}x^2$ . The area of  $ACEG$  is  $x^2$  because it is a square. The student said the area of  $\triangle DEF$  would be  $\frac{1}{4}$  of the area of square  $ACEG$ . The correct answer is  $\frac{1}{8}$  of the area of the square, so the student is wrong.

The primary justification skills appearing in this response are captured by the JE statements “Indicate an error occurred” and “Indicate an error and use a mathematical concept (definition, theorem, or axiom) to explain why an error occurred.” Additionally, the complex structure of the argument in the response is direct evidence of the statement “Use two or more Claims to draw a Conclusion and provide Support for at least one Claim—at least one Claim or Support must be General.” Finally, the response also demonstrates direct evidence of “State a property or classification of an object,” “State a definition, theorem, formula, or axiom,” “State a relationship between two objects,” and “Provide a computation.”

The response successfully completes the task assigned by constructing an argument that uses multiple claims, definitions, and formulas to explain why the student in the problem is incorrect. The response successfully synthesizes the given information with outside knowledge, as evidenced in the use of formulas and definitions. Furthermore, the response demonstrates understanding of the given information, uses logically consistent reasons to support mathematical claims, and expresses the argument in a clear, organized manner.

### Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Justification & Explanation	7	Work on identifying reasons for mathematical steps. Can you identify errors in someone's math homework?	Explain how to solve a problem on a calculator and why it makes sense to do all the steps.
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 9

A pattern exists among the units digits of the powers of 7, as shown below. What is the units digit of  $7^{50}$  ?

$$7^0 = 1 \quad 7^3 = 343 \quad 7^6 = 117,649$$

$$7^1 = 7 \quad 7^4 = 2,401 \quad 7^7 = 823,543$$

$$7^2 = 49 \quad 7^5 = 16,807 \quad 7^8 = 5,764,801$$

(Note: The units digit of 2,401 is 1.)

- A. 1
- B. 3
- C. 4
- D. 7
- E. 9

Question type	CCSSM topic	Correct response
Selected Response	5.OA.B, MP1, MP7, Exhibit knowledge of elementary number concepts such as rounding, the ordering of decimals, pattern identification, primes, and greatest common factor (N 20–23)	E

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
5	Grade Level Progress > Operations & Algebraic Thinking	No	3
6–EHS	Foundation	No	3

Mathematics is sometimes described as a study of patterns. The word “pattern” is found throughout CCSSM. This exemplar assesses a student’s ability to recognize a pattern and use the pattern to solve a problem, a part of CCSSM Mathematical Practice 7 (MP7): “Look for and make use of structure.” The question is based on content from CCSSM cluster 5.OA.B. The question involves a relatively high level of competence with Mathematical Practice 1 (MP1): “Make sense of problems and persevere in solving them.” Understanding the place-value structure of whole numbers and operations on whole numbers, as well as more advanced relationships involving factors, multiples, and remainders are useful for finding the solution. The question is at a DOK level of 3—students must make decisions on to how to approach finding a solution.

## Correct Response

A student solution involves recognizing that the number pattern of the units digit generated by the powers of 7 repeats every 4 terms. Using that structure, the student can figure out where the 50th term fits into the pattern, which can be connected to the remainder when 50 is divided by 4. Answer option E is the correct answer.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 10

A student thinks that the sum of 4.3 and 8.4 is 12.7 because  $4 + 8 = 12$  and  $3 + 4 = 7$ . The student then adds 3.7 and 2.6 and gets 5.13 because  $3 + 2 = 5$  and  $6 + 7 = 13$ . Identify the mistake in the student's procedure, and explain why this procedure won't always work.

1200

Question type	CCSSM topic	Correct response
Justification & Explanation (Constructed Response)	5.NBT.B, MP3, Perform one-operation computation with whole numbers and decimals (N 13–15)	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	JE level	Modeling	DOK level
5	Grade Level Progress	3	No	3
6–8	Foundation	3	No	3
EHS	Foundation	2	No	3

This task elicits an explanation of why a procedure is not always effective. When learning about decimals, students often make the mistake of just adding the digits instead of adding the value of the numbers. This task is crafted carefully so that successful students must identify the misconception and explain why it is incorrect by appealing to a general mathematical concept. The content here is place value, a topic from CCSSM grade 5 (5.NBT.B.7). The focus is on mathematical justification, captured by CCSSM in MP3: “Create viable arguments and critique the reasoning of others.”

For grade 5 students, this task would be a part of the Grade Level Progress reporting category. This task would also be appropriate for the Grades 6, 7, 8, and Early High School tests as a part of the Foundation reporting category. At grades 5–8, this task is a part of the Justification and Explanation reporting category, requires JE level 3 reasoning, and is DOK level 3. For the Early High School test, this would be considered JE level 2.

### Correct Response

A student could receive full credit for the following sample response:

The student didn't pay attention to place value and added the tenths place wrong.  
 $0.6 + 0.7 = 1.3$ . The student's procedure won't always work because if you add numbers by place value and get a number greater than 9, you must carry to the next largest place value.

The heart of the justification in this response is captured by the JE statements “Indicate an error occurred” and “Indicate an error and use a mathematical concept (definition, theorem, or axiom) to explain why an error occurred.” The student uses a general mathematical concept in the response (“if you add numbers by place value and get a number greater than 9, you must carry to the next largest place value”), a skill captured by the JE statement “State a definition,

theorem, formula, or axiom.” This response also provides direct evidence of “Provide a computation,” “State a relationship between two or more objects,” and “Use a General Statement to draw a Conclusion or Provide General Support for a Statement.”

The response successfully completes the task assigned, telling why the student in the problem is incorrect and thoroughly explaining why the procedure won’t always work. The response demonstrates understanding of the given information, uses logically consistent reasons to support mathematical claims, and expresses the argument in a clear, organized manner.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Justification & Explanation	7	Work on identifying reasons for mathematical steps. Can you identify errors in someone's math homework?	Explain how to solve a problem on a calculator and why it makes sense to do all the steps.
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 11

Four friends will build a model castle. The castle will have 4 walls made of 20 blocks each and 4 towers made of 5 blocks each. Each friend described a way to find the total number of blocks needed to build the castle, as shown below.

- Gordon: “Add 20 and 5, and then multiply that sum by 4.”
- Kate: “Add 4 and 5, and then multiply that sum by 20.”
- Selena: “Multiply 4 and 5. Multiply 4 and 20. Then add those 2 products together.”
- Thomas: “Add 20, 4, and 5, and then multiply that sum by 4.”

Which 2 friends wrote correct expressions?

- A. Gordon and Selena
- B. Gordon and Kate
- C. Kate and Selena
- D. Kate and Thomas
- E. Selena and Thomas

Question type	CCSSM topic	Correct response
Selected Response	3.OA.B, MP4	A

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
3	Grade Level Progress > Operations & Algebraic Thinking	No	3
4	Foundation	No	3
5–7	Foundation	No	2

This question assesses a student’s ability to “look for and make use of structure” (MP7) and to use that algebraic structure to correctly find the total number of blocks needed to build the castle—a skill that is aligned with CCSSM 3.OA.B.5. Because students are required to recognize the underlying structure in this question and use that structure to identify which two seemingly dissimilar procedures result in the correct total number of blocks needed, this question is at DOK level 3 for the Grades 3 and 4 tests and DOK level 2 for the Grades 5, 6, and 7 tests. For the Grade 3 test, this question would be part of the Operations and Algebraic Thinking reporting category within the Grade Level Progress reporting category. On all other tests, this question would contribute to the Foundation reporting category.

### Correct Response

A student solution will require understanding of the distributive property. Specifically, the student must realize that the total number of blocks in four groups of 25 blocks (the total that

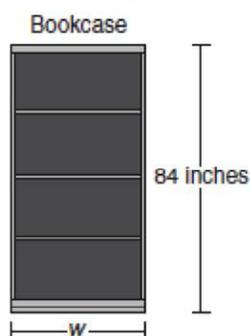

results from Gordon's method) is the same as the total number of blocks in four groups of five blocks and four groups of 20 blocks (the total that results from Selena's method). Answer option A is the correct answer.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 12

1. Kate is placing her new bookcase against a wall in her bedroom. The length of the bookcase is 84 inches, and the width ( $w$ ) is half the length.

What is the area, in square inches, of the section of the wall the bookcase will cover?

- A. 252
- B. 504
- C. 1,764
- D. 3,528
- E. 7,056

Question type	CCSSM topic	Correct response
Selected Response	4.MD.A	D

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
4	Grade Level Progress > Measurement & Data	No	3
5–7	Foundation	No	2

This question focuses on the application of the area formula for rectangles, which is content that aligns with CCSSM.4.MD.A.3. Because students must recall the area formula and derive the width from the given information, for grade 4 students this is a DOK level 3 question that contributes to the Measurement and Data reporting category within Grade Level Progress. Because students beyond grade 4 have a higher degree of mastery of the application of the rectangle area formula, this is a DOK level 2 skill for the Grades 5, 6, and 7 tests and is part of the Foundation reporting category.

### Correct Response

To correctly respond to this question, a student must first recall that the area formula for a rectangle is  $A = L \times W$ . In this case, the length is given to be 84 inches. The student must then derive a width of 42 inches from the given fact that the width is half the length. Multiplying these two numbers gives answer option D.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 13

A ribbon has a length of  $2\frac{5}{8}$  inches. What is the total number of  $\frac{1}{3}$  inch segments in this ribbon?

- A. 1
- B. 2
- C. 6
- D. 7
- E. 8

Question type	CCSSM topic	Correct response
Selected Response	6.NS.A, MP2, MP6	D

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
6	Grade Level Progress > The Number System	Yes	2
7	Foundation	Yes	2

This selected-response question assesses a student's ability to find the quotient of a mixed number and a unit fraction (CCSSM.6.NS.A.1). The student must rely on context to fashion a mathematical model to relate the two given numbers to each other (MP2, MP6). On a Grade 6 test, this question would be part of the Number System reporting category under the Grade Level Progress reporting category. Given that grade 6 students will further develop their skills with rational numbers a year later, this question would also be part of the Foundation reporting category on a Grade 7 test. For both of these tests, this question would contribute to the Modeling reporting category. Working with word problems that involve calculations with and interpretations of rational numbers is a DOK level 2 skill for the Grade 6 and 7 tests.

### Correct Response

Dividing the ribbon's length by  $\frac{1}{3}$  gives a result of  $7\frac{7}{8}$ . This means that the ribbon can be subdivided into seven segments that are each  $\frac{1}{3}$  inch long, leaving one segment that is shorter than  $\frac{1}{3}$  inch. Therefore, answer option D is the correct response.

A student must be careful in the selection of an answer. Choosing answer option E may indicate a need to learn to suppress the instinct to round the result of a calculation, given that the result is not merely a value but rather a quantity (MP6).

### Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 14

The table below represents the number of episodes of a certain television series Jessica, Kev, and Miriam watched last weekend.

Name	Total number of episodes watched
Jessica	$j$
Kev	$k$
Miriam	$m$

Kev watched 2 fewer episodes than Jessica. Miriam watched  $\frac{1}{2}$  as many episodes as Kev.

One of the following statements is NOT true. Which one?

- A. Jessica watched  $k+2$  episodes.
- B. Miriam watched  $k \times \frac{1}{2}$  episodes.
- C. Miriam watched  $k \times 2$  episodes.
- D. Kev watched  $m \times 2$  episodes.
- E. Kev watched  $j - 2$  episodes.

Question type	CCSSM topic	Correct response
Selected Response	6.EE.B, MP2, Exhibit knowledge of basic expressions (e.g., identify an expression for a total as $b + g$ ) (A 13–15)	C

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
6	Grade Level Progress > Expressions & Equations	No	3
7	Foundation	No	3
8, EHS	Foundation	No	2

This question measures a student's ability to reason with and find relationships between variables, skills that are a part of CCSSM Mathematical Practice 2 (MP2) and CCSSM.6.EE.B.6. This question would be part of the Expressions and Equations reporting category within the Grade Level Progress reporting category for the Grade 6 test and the Foundation reporting category for the Grades 7 and 8 and Early High School tests. The analysis required to determine which of the five statements is not true coupled with the abstract reasoning required by the use of variables makes this question a DOK level 3 skill when used on the Grades 6 and 7 tests. Since students grow more comfortable using variables at higher grades, this question would be DOK level 2 for the Grade 8 and Early High School tests.

## Correct Response

A successful response requires the student to synthesize all the given information and use that information to decide which statement is not true. Because it was given that Miriam watched half as many shows as Kev, and because the expression  $k \times 2$  represents twice as many shows watched as Kev, the statement “Miriam watched  $k \times 2$  episodes” is not true, which means answer option C is correct.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 15

Matt has a piano book with 84 songs in it. Matt has learned to play 25% of these songs. What is the total number of songs in this book that Matt has NOT learned to play?

- A. 16
- B. 21
- C. 59
- D. 63
- E. 112

Question type	CCSSM topic	Correct response
Selected Response	6.RPA	D

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
6	Grade Level Progress > Ratio & Proportion	No	2
7	Foundation	No	2

This question assesses a student's ability to use ratio reasoning to solve a mathematical problem (CCSSM.6.RP.A.3). When this question appears on the Grade 6 test, it contributes to the Ratio and Proportion reporting category within the Grade Level Progress reporting category. In addition, this question could appear on a Grade 7 test, where it would be part of the Foundation reporting category. In both cases, the fact that a student must perform a few simple steps to reach the correct solution makes this a DOK level 2 skill.

### Correct Response

One correct solution pathway in this question is to realize that because Matt has learned to play 25% of the songs in the book, he has NOT learned to play 75% of the songs. 75% of the 84-song total is 63, which makes answer option D the correct response.

### Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 16

There are 6.8 acres of land that will be equally divided into 9 lots. Which of the following values is closest to the number of acres each lot of land will have?

- A. 0.75
- B. 0.76
- C. 1.32
- D. 1.33
- E. 2.20

Question type	CCSSM topic	Correct response
Selected Response	7.NS.A	B

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > The Number System	Yes	1

This question assesses a student's ability to round the quotient of a decimal and a whole number (CCSSM.7.NS.A.2). While this question provides a context for the given values, the procedures required for a solution are well practiced by grade 7. As such, this question would appear only on a Grade 7 test under the Number System reporting category within the Grade Level Progress reporting category, and it would represent a DOK level 1 skill. This question would be mapped to the Modeling reporting category for grade 7, as students at this level are still refining their skills at crafting a mathematical model that can be used to solve elementary applied problems.

### Correct Response

Given that all answer choices are given to the nearest hundredth, a student must divide 6.8 by 9 and list the intermediate result to the nearest thousandth in order to arrive at the correct final rounded result. Given that 6.8 divided by 9 is approximately 0.755, and given that the digit in the thousandths place is at least 5, the student must round the quotient to 0.76. Therefore, the correct answer is answer option B.

Certain answer options reveal common errors a student may make. Students who select answer option A may not be aware of the level of precision needed when dividing to round a solution properly. Students who select answer option D are likely attuned to the necessary level of precision but need to understand that correctly ordering numbers in a division problem is important.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
The Number System	7	Work on adding, subtracting, multiplying, and dividing with negative numbers. Can you find the fractional equivalent for a repeating decimal?	Have a friend choose a fraction. Show him or her how to convert that fraction to decimal form.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 17

Molly built a dollhouse that is a scale model of her home. The floor plan for the bottom floor of the dollhouse is shown below, with measurements in inches. The rooms and hall are represented by rectangles.

Molly painted the floors of the 2 rooms and the hall shown in the floor plan. To the nearest 0.01, what is the total area, in square inches, that Molly painted?

Type your answer in decimal form to the hundredths place in the box.

square inches

Question type	CCSSM topic	Correct response
Technology Enhanced	4.MD.A, MP6, Compute the area and perimeter of triangles and rectangles in simple problems (G 20–23)	See explanation.

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7–8	Foundation	No	3
EHS	Foundation	No	2

This question is the first of three questions related to common information. These three questions are independent of each other in that it is not necessary to obtain the correct solution to one question in order to answer any of the other questions. Sets of questions like these require students to extract only the information needed to answer a particular question. This provides an additional cognitive demand on students that standalone questions may not and reinforces a skill that effective consumers of information have.

### Correct Response

This free-response problem provides evidence of the student’s ability to solve a word problem involving measurements given in decimal form (CCSSM.4.MD.A). In order to provide a correct response, the student must accurately calculate the answer to the requested precision (MP6). The student must find the area for each of the rooms and calculate the sum, obtaining a correct answer of 67.68. For students taking the Grades 7 or 8 tests, this problem would be considered nonroutine due to the fact that the student must find the missing dimensions in order to calculate the total area (DOK level 3). This problem is part of the Foundation reporting category for the Grades 7, 8, and Early High School tests.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Foundation	7	Continue to strengthen your skills by applying and integrating the mathematics you learned in previous grades.	Everybody makes mistakes. When you make one, think about what tipped you off to there being something wrong, and think about whether you could have noticed it sooner.

## Question 18

Note: 1 inch in the model represents 2.5 feet in the home.

Molly added curtains along the entire length of 1 of the shortest walls in the dining room. To determine the length, in inches, of material she needed, she found the value of the expression  $3.6(1.05)$ .

What are the measurements, **in feet**, of the rooms and hall on the bottom floor of Molly's home that correspond to the measurements shown in the floor plan?

Drag the numbers into the empty boxes.

3	3.7	4	4.9	6	6.1	7	7.3
9	9.7	10	12	14	15	16	18

Question type	CCSSM topic	Correct response
Technology Enhanced	7.G.A, Solve routine one-step arithmetic problems using positive rational numbers, such as single-step percent (A 16–19)	

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > Geometry	Yes	2
8, EHS	Foundation	No	2

This question is the second of three questions related to common information. This question is a DOK level 2 question for both the Grade 7 and Grade 8 tests. It is part of the Geometry reporting category within Grade Level Progress when placed on the Grade 7 test, and it is part of the Foundation reporting category if placed on the Grade 8 or Early High School tests.

At grade 7, this problem would contribute to the Modeling reporting category. At grades 8 and above, producing this model should be automatic and therefore this question is not counted in the Modeling reporting category for the Grade 8 or Early High School tests.

## Correct Response

In this question, students must determine actual lengths given information from a scale drawing (CCSSM.7.G.A.1). Students are given a conversion factor and must set up the correct proportions to determine the lengths of the rooms in the actual home, drawing on previous knowledge of proportional relationships (CCSSM.6.RP).

Moving clockwise around the figure, the missing lengths are 15, 18, 12, 9, 6, and 3. The process the student uses to determine one length must be repeatedly and consistently applied to determine all lengths.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
Geometry	7	Work on solving problems involving surface area and volume. Can you describe how circumference and area are related to a circle?	Create a scale drawing of your room and describe the relationship between the actual measurements and the measurements in your drawing.
Modeling	7	Ask someone to describe a mathematical situation and write a numerical statement describing it. That's creating a model.	Find a real-world situation and create a model to describe and predict information.

## Question 19

Molly built a dollhouse that is a scale model of her home. The floor plan for the bottom floor of the dollhouse is shown below, with measurements in inches. The rooms and hall are represented by rectangles.

Which of the following expressions is equivalent to the expression Molly used to determine the length, in inches, of material she needed for curtains?

- A.  $3.6(0.05)$
- B.  $3.6 + 0.05$
- C.  $3.6 + 5(3.6)$
- D.  $3.6(1 + 1.05)$
- E.  $3.6(1 + 0.05)$

Question type	CCSSM topic	Correct response
Selected Response	7.EE.A, MP2, Exhibit knowledge of basic expressions (e.g., identify an expression for a total as $b + g$ ) (A 13–15)	E

Appropriate grade level(s)	Foundation and Grade Level Progress reporting categories	Modeling	DOK level
7	Grade Level Progress > Expressions & Equations	No	2
8, EHS	Foundation	No	2

This question is the third and final question in a set related to common information. This question is part of the Expressions and Equations reporting category within the Grade Level Progress reporting category for the Grade 7 test; it is part of the Foundation reporting category for the Grade 8 and the Early High School tests.

### Correct Response

In this selected-response question, the student is required to identify an expression written in a form that demonstrates how quantities of interest can be represented in equivalent mathematical forms (CCSSM.7.EE.A), making sense of quantities in a problem situation (MP2). To arrive at the correct answer in answer option E, the student should recognize that 1.05 can be written as  $1 + 0.05$ . The ability to represent a percent increase in various but equivalent forms is a DOK level 2 skill for grades 7 through EHS.

## Improvement Idea Statements

Reporting category	Grade	Low statement (scored below ACT Readiness Range)	High statement (scored at or above ACT Readiness Range)
Grade Level Progress	7	Complete your homework when assigned. Meet with a friend and quiz each other on the concepts learned each day.	Help a friend in your class who is struggling with a math assignment.
Expressions & Equations	7	Work on creating equivalent expressions using properties of operations. Create a list of what's the same and what's different when solving arithmetically versus solving algebraically.	Pick an expression from your math homework and create an expression that is equivalent. Describe to your teacher how you created the second expression.
